

# Pumping Stations

**BELOW GROUND**

**GR**  
GORMAN-RUPP  
PUMPS  
*The Pump People*

Gorman-Rupp's below ground stations, with their inconspicuous low-silhouette entrance tube, are widely used in residential areas. The fiberglass enclosures accommodate duplex or triplex pump configurations sized to meet your pumping requirements. Pumps are available in 3", 4", 6", 8" and 10" sizes with flows from 50 to 3200 GPM on single pump operation.

The Gorman-Rupp T Series self-priming pumps allow for a more shallow burial than most other pumps. This capability can save up to 25 feet of digging and greatly reduce installation costs, as well as the need for elevators and/or platforms.

Totally factory-built and pre-tested, the station is delivered to the job site complete, ready to install and operate once simple piping and power connections are made.
